Audi E7X (SAIC-Audi)

24/04/2026

The second model of the no-rings "AUDI" brand that Audi develops with SAIC for China, shown at the 2026 Beijing Auto Show after the E5 Sportback. It is an electric SUV aimed at young Chinese buyers, with a pronounced bonnet, soft shoulders, muscular wheel arches and short overhangs.

What makes it relevant for the exterior part is the front: **the grille disappears, replaced by light loops front and rear made up of over a thousand triangular elements**, with slim vertical matrix headlights along the edges. It is the most radical version of an idea running through all of 2026: the front end as an optical part, not a mesh.

Audi gave no dimensions, interior materials or powertrain data at the reveal.
