BYD Ocean-V Concept

29/04/2026

BYD defines the Ocean-V, premiered at Beijing 2026, as a "family mobile life cube" that refuses to fit the sedan, SUV or MPV categories. It is a study with no direct production model, although the brand says its innovations will gradually reach the range.

A tall, boxy body: vertical LED headlights with a light bar below the windscreen, large overfenders, **thick side mouldings to guard against stone chips and scratches**, camera mirrors and a three-tone scheme (teal body, silver sides and black A-pillars linking windscreen and rear window in one line).

Inside, three modes activated at the push of a button (driving, cinema and camping), flexible seats and jellyfish-shaped speakers that attach magnetically at many points in the cabin. Exposed-plastic protective mouldings and mass colour take centre stage again.
