Peugeot RCZ Vision

11/10/2026

Peugeot revives the RCZ name (2009–2015) with a four-seat electric coupé shown at Paris 2026, which it calls an "emotional manifesto of the brand" without confirming production. It is the first vehicle on the STLA One platform: a 1,000 V architecture and a **solid-state battery** developed with Factorial Energy, just 110 mm thick, with 368 kW, up to 600 km of range, 11.5 kWh/100 km and 10–80% charging in ten minutes.

Outside, the "double bubble" glass roof running from bonnet to tail, horizontal light claws front and rear, a micro-perforated RCZ graphic on the bumper, an active spoiler hidden at rest and forged 21- and 22-inch wheels, with triangular motifs quoting the original.

Inside, the "Hypersquare" wheel groups the controls in four rings, with steer- and brake-by-wire (under one turn lock to lock), a configurable transparent micro-LED display above the wheel, mobile air vents, an **aluminium console topped with frosted glass**, a Serica clock and Pelinova recycled leather made from offcuts. Design director Matthias Hossann sums the language up in five principles: freedom, courage, elegance, instinct and inner force.
