New Colour & Trim activity

28/09/2009

Here at MTC, a new 100m2 Colour & Trim area has been created. It has an injection moulding machine, laser and tampoprinting machines, rapid prototyping, painting facilities and a material library. It's our vocation to give service to our clients, and with this new Colour & Trim activity we aim to get in contact with them in a very early stage of the projects, collaborating on the conception of the projects and defining with our clients the decorations to be developed.
